February 12th, 2021

Product/Process Change Notification No: 2021-001

Change Classification: Minor

Subject: Serial Tag: change of Supplier for tags used on DO213AA and Current Regulator DO213AB

Description of Change:

This correspondence is official notification of the change of Supplier of serial tag used on JANS and JANS-equivalent DO213AA product and Current Regulator DO213AB due to the discontinuance of the currently used tag. The current tag is an ink imprinted thin polyester film with a solvent resistant white topcoat and an acrylic pressure sensitive adhesive. The new tag is a digital print on a white cast vinyl film, coated with a permanent high tack acrylic adhesive, backed with a lay-flat release liner.

Reason for Change:

The current tag is discontinued by the supplier.

Application Impact:

Microchip has validated the new tag through its screening processes with equal or better performance than the original. ASTM E595 testing was completed to compare and validate outgassing properties of the original tag versus the new tag.

Method of Identifying Changed Product:

The print method and tag material are a visual indicator of the change. Figure 1 shows the current and the new tags:

Figure 1: Change in print method and tag material

Products Affected by this Change:

All JANS and JANS-equivalent DO213AA packages that require serialization.

All Current Regulator JANS and JANS-equivalent DO213AB packages that require serialization.

All currently open orders requiring serialization will be supplied with the new tags.

Production Shipment Schedule:

Product with new serial tags are planned to ship no sooner than 1st March 2021.

During a transition period, customers may see shipments with either format while any existing inventory of parts is depleted.
