Change Description: Optimized device variant B will replace current variant A order codes for SAM D21 products with 64kB and 32kB of Flash.

Device Variant B of the SAM D21 is hex compatible to device variant A if you do not want to enable any of the new improved features.

Changes compared to device variant A

- Read While Write programming support added
- The device Signature row is updated to reflect the new die revision
- Errata fixed compared to the latest die revision (rev. D) of device variant A. Please see datasheet for details in Errata section, Chapter 39 by referencing the errata numbers listed below
 - 13951
 - 12005
 - 13411
 - 14154
 - 12118

- New Errata not present in Device Variant A.
 - SYSTICK Calibration value is wrong. Errata Reference 14155. See datasheet for software workaround details.
- Change in die size, but no change in process geometry

Identification Method to Distinguish Change:

Top side marking, order codes, and labelling

Change in device variant letter from "A" to "B"

Example:

Old device variant: ATSAMD21E15**A**-MUT

New device variant: ATSAMD21E15**B**-MUT

On packages where space permits the A and B marking are also included in the top mark
